

In response to the NAB's petition 04-160I am writing to voice my concerns of this issue.

It is my right to receive weather and highway reports from satellite radio and I am currently subscribed to XM Satellite Radio and use two receivers daily.

I am also a licensed amateur radio operator KC6IIH and have the satellite radio because the area where I live has a very poor choice of programing.

Please count my vote FOR the satellite services to be able to transmit weather and highway conditions.
